POWER QUERY EDITOR

The screenshot shows the Power Query Editor interface. The main area displays a table with the following columns: OrderNumber, OrderDate, Customer Name Index, Channel, Company Code, Code, and Region ID. The table contains 23 rows of data. The right-hand pane shows the 'Query Settings' for 'Sales Details', including 'Name', 'Source', 'Navigation', 'Promoted Headers', and 'Applied Steps' (Changed Type).

| OrderNumber | OrderDate | Customer Name Index | Channel | Company Code | Code | Region ID |
|-------------|------------|---------------------|---------|--------------|----------|-----------|
| 1 | 23/08/2019 | 01 | Import | None | 94000087 | |
| 2 | 23/08/2019 | 01 | Import | None | 94000087 | |

| 23 | 23/08/2019 | 01 | Import | None | 94000087 | |

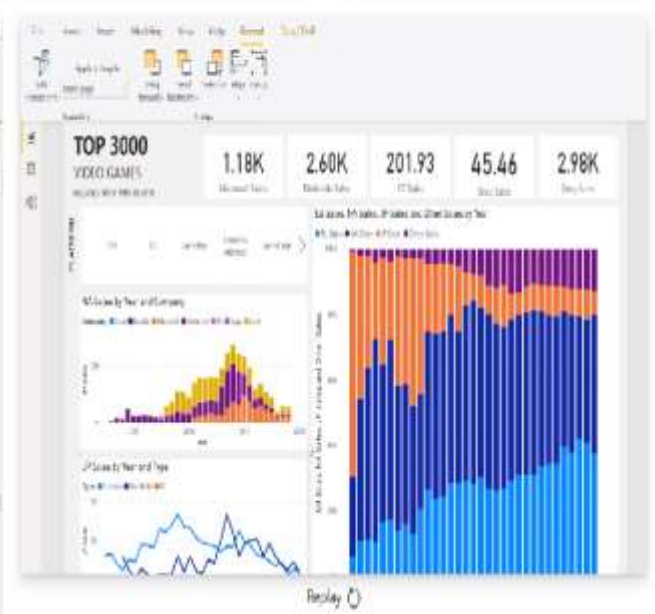

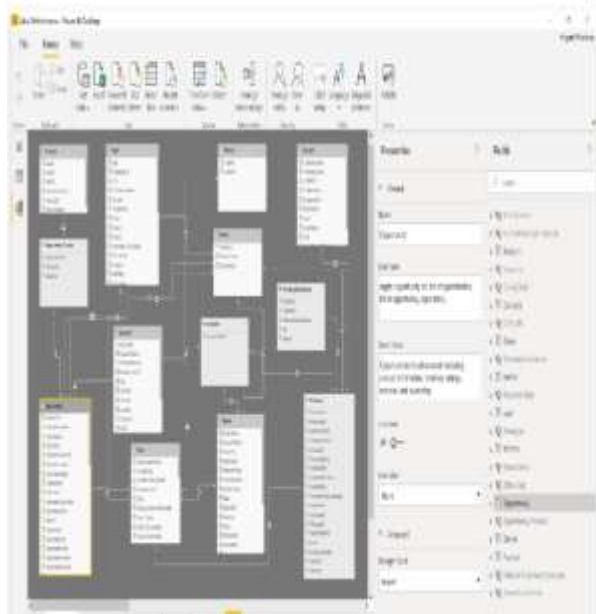

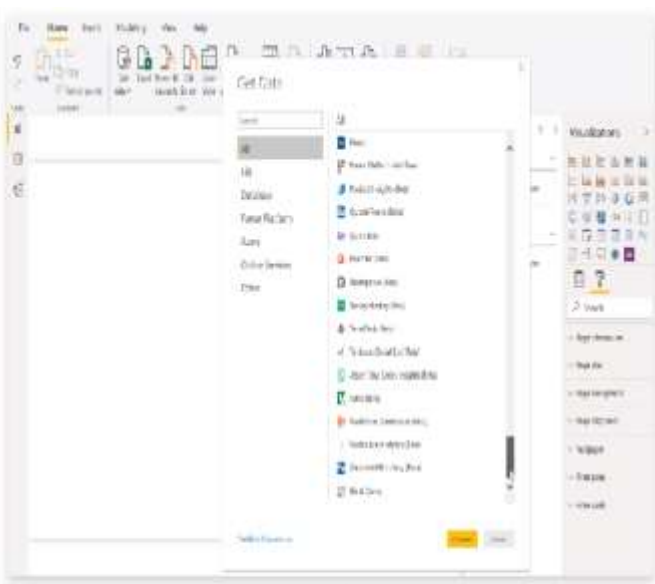

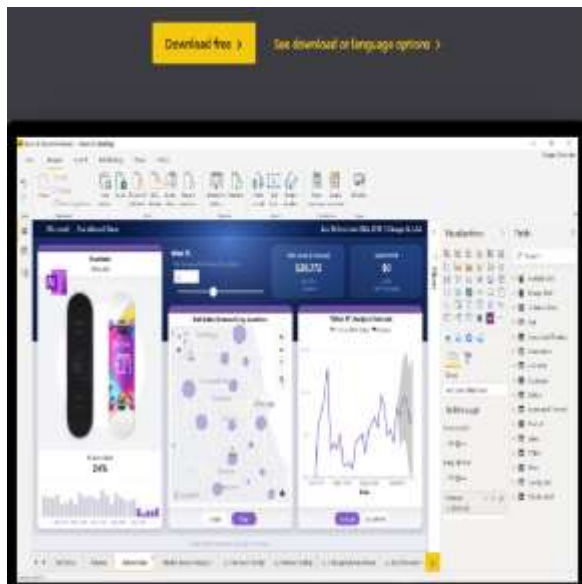

ADVANCED EDITOR

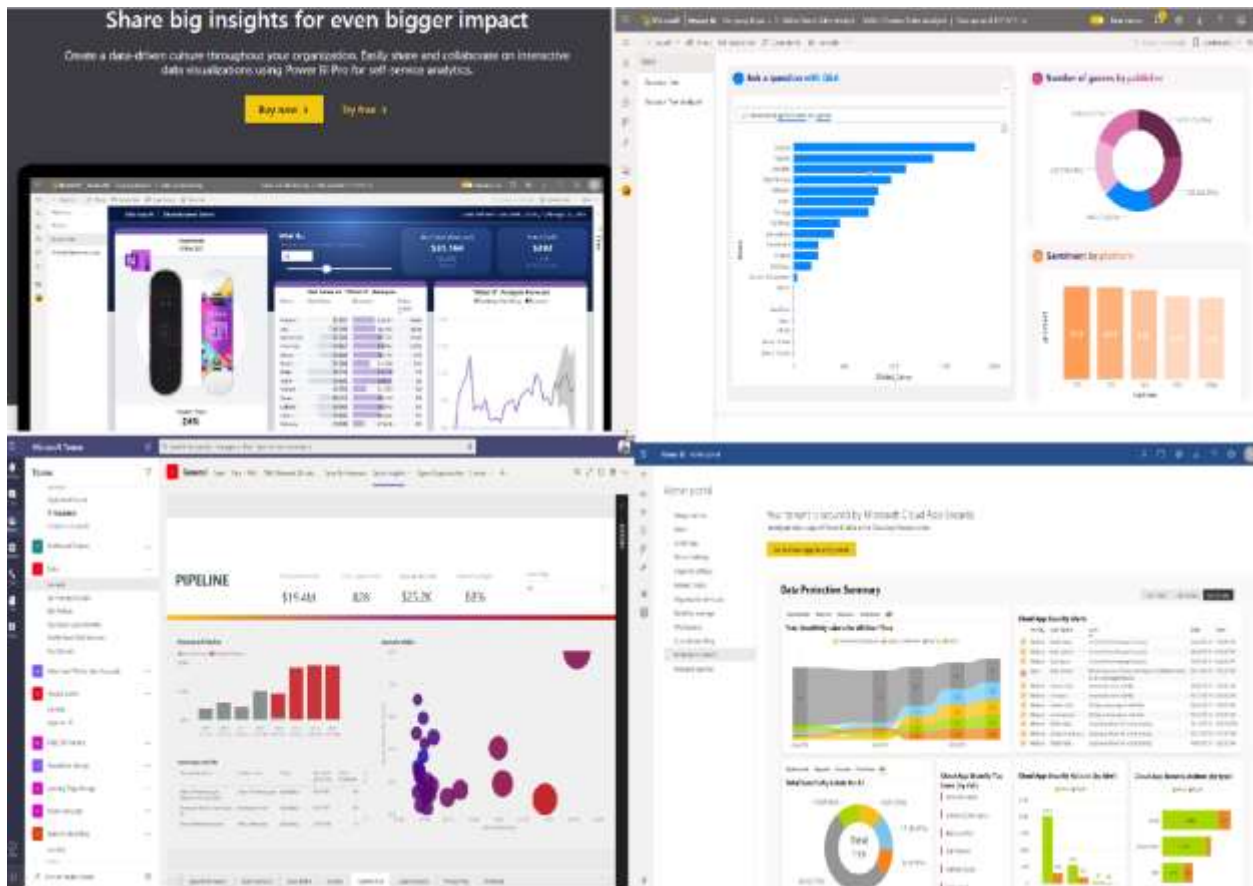

The screenshot shows the Power Query Editor interface with the 'Advanced Editor' window open. The 'Sales Details' query is defined in M code. The query defines the source, promotes headers, and changes the data type.

```
1 Source = Excel.Workbook(File.Contents("E:\INERON-PowerBI\Tables\Data Set-DataModel-4thMay (Data Set)\NorthSea ImportExports.xlsx"), null,
2 #Sales Details_Sheet = Source[[Item="Sales Details",Kind="Sheet"]][Data],
3 #Promoted Headers = Table.PromoteHeaders(#Sales Details_Sheet, [PromoteAllScalars=true]),
4 #Changed Type = Table.TransformColumnTypes(#Promoted Headers,{"OrderNumber", Int64.Type}, {"OrderDate", type date}, {"Customer Name Index", Int64.Type}),
5 #Changed Type
```
